\( \sin(\psi_{n+} \phi_{\perp}) \) vs. \( A_{UT} \) for the reaction \( e^\pm + p^\uparrow \rightarrow e^\pm + K^+ K^- + X \). The graph shows data points with error bars for varying \( M_{KK} \) (GeV) in the range from 1.2 to 2 GeV. The error bars indicate the 7.3% scale uncertainty. The "HERMES Preliminary" text is visible in the upper right corner of the graph.
